EDUCATION

Stevens Institute of Technology | Hoboken, NJ

Bachelor of Science in Computer Science

Minor in Mathematics

Expected Graduation: May 2027

Cumulative GPA: 3.88/4.00

Awards: Stevens Grant (\$180K), Advanced Placement Scholar Award, Deans List: Fall 2024, Spring 2025, Fall 2025

Relevant Coursework: Data Structures, Algorithms, Computer Architecture, Discrete Structures, Database Management Systems, Linear Algebra, Differential Equations, Machine Learning Fundamentals

EXPERIENCE

Data Science Intern

Data Glacier

March 2025 – July 2025

Remote

- Engineered end-to-end NLP preprocessing pipelines for 10K+ text samples, implementing **tokenization**, cleaning, and **feature extraction**, reducing model training time by 30% and improving classification accuracy by 15%.
- Built and deployed an Iris classification model with **Flask** and **Render**, implementing CI/CD automation via **GitHub Actions**, cutting deployment time in half and ensuring version reproducibility.
- Optimized AI/ML workflows by conducting feature engineering, **hyperparameter tuning**, and model evaluation with **TensorFlow**, **Keras**, and **Scikit-learn**, boosting predictive performance and enabling robust production pipelines.

Course Assistant

Stevens Institute of Technology

September 2025 – Present

Hoboken, NJ

- Improved **Python programming fundamentals** for **20+ students** by leading lab sessions focused on **control flow, functions, and recursion**, supporting structured data processing and experimentation workflows.
- Introduced **Java-based data structures** (lists, stacks, queues, maps) and **sorting and searching**, strengthening students' ability to organize and traverse structured data.
- Guided students in debugging code and reasoning about **time complexity and correctness**, reinforcing analytical thinking essential for data-driven and machine learning tasks.

PROJECTS

Recrootly | *React, Supabase*

May 2025 – June 2025

- Developed an AI-powered resume scoring platform with **React** UI and **SQL** backend, deploying on **Vercel** to automate candidate evaluation, reducing manual review workload by **50%**.
- Integrated **Mistral 7B** with custom prompts to generate structured scoring data, standardizing evaluation workflows and improving recruiter efficiency.

Nudge AI | *Flutter, FastAPI*

July 2025 – October 2025

- Built AI-driven task management workflows with **FastAPI**, **Firebase**, and **OpenAI**, enabling proactive nudges and intelligent tracking, increasing managers' on-time task completion by **30%**.
- Integrated voice, calendar, and push notifications, automating user interactions and reducing manual tracking effort.

Twitter Hate Speech Detection | *Python, TensorFlow, Keras, Pandas*

April 2025 – May 2025

- Developed a multi-layer perceptron classifier for large-scale **Twitter data**, implementing tokenization, padding, dropout, and **ReLU** layers, demonstrating end-to-end **NLP workflow** expertise.
- Optimized model with hyperparameter tuning and early stopping, improving accuracy by **18%** and F1 score by **22%** on imbalanced datasets.

SKILLS

Languages: Python, Java, C/C++, JavaScript, SQL

Frameworks: React, FastAPI, Pandas, NumPy, Matplotlib, TensorFlow, Keras, PyTorch, Scikit-learn

Tools: AWS EC2, Firebase, Vercel, Google Colab, Git, Bash, Linux, Docker, Jupyter
