EDUCATION

Stevens Institute of Technology | Hoboken, NJ

Bachelor of Science in Computer Science

Minor in Mathematics

Expected Graduation: May 2027

Cumulative GPA: 3.88/4.00

Awards: Stevens Grant (\$180K), Advanced Placement Scholar Award, Deans List: Fall 2024, Spring 2025, Fall 2025

Relevant Coursework: Data Structures, Algorithms, Computer Architecture, Discrete Structures, Principles of Programming Languages, Systems Programming, Database Management Systems

EXPERIENCE

Software Engineer

January 2026 – Present

Blueprint

Hoboken, NJ

- Engineering a **Retrieval-Augmented Generation (RAG)** system using **LangChain** and **AWS Bedrock** to ingest **1,000+** internal documents, enabling **50+** members to execute concurrent queries across knowledge bases.
- Architecting a scalable serverless backend on **AWS** (Lambda, API Gateway, SQS) to efficiently process concurrent user requests, utilizing an event-driven pipeline to manage traffic spikes.
- Optimizing retrieval performance by implementing a hybrid storage design using **DynamoDB** for chat indexing and **S3** for vector storage, enforcing strict **IAM role-based access control** for data security.

Software Engineering Intern

July 2025 – October 2025

Quantum Pulse Consulting

Remote

- Built and deployed production-ready full-stack web applications, supporting authenticated users and dynamic data flows, by implementing a **React** frontend backed by PostgreSQL schemas and indexed queries.
- Designed and implemented RESTful APIs with **Firebase** Authentication and real-time listeners, enabling low-latency multi-client updates and consistent state synchronization across sessions.
- Automated cloud deployment and release workflows on **AWS** using **CI/CD pipelines**, reducing manual deployment effort and improving release reliability for iterative feature delivery.

Course Assistant

September 2025 – Present

Stevens Institute of Technology

Hoboken, NJ

- Taught **programming fundamentals** through **Python**-based lab sessions for **50+** students, reinforcing control flow, functions, and recursion to improve code structure and correctness.
- Led **Java**-based instruction in **data structures** (lists, stacks, queues, maps) and **algorithms** (sorting, searching), enabling students to build more efficient and maintainable applications.
- Reviewed and debugged student projects using testing practices, UML diagrams, and time complexity analysis, improving software design quality and performance awareness.

PROJECTS

Minecraft Portfolio Engine | *React, Three.js, Vite*

January 2025 – February 2025

- Architected an interactive technical portfolio engine using **React** and **Vite**, implementing a custom state machine to manage complex grid-based inventory systems and real-time JSON recipe validation for dynamic project discovery.
- Engineered a high-performance 3D rendering layer using **React Three Fiber**, developing custom hooks for procedural skeletal animation to track real-time user input and optimizing asset delivery to ensure high frame rates across devices.
- Implemented a modular UI component library and global state architecture using **React Context API**, integrating a synchronized audio engine and an event-driven achievement system to provide high-fidelity visual and sensory feedback.

Recrootly | *React, Supabase*

May 2025 – June 2025

- Architected a full-stack AI-powered resume scoring platform using **React** and **Supabase**, implementing structured data ingestion and query-driven analysis for automated candidate evaluation.
- Integrated the **Mistral 7B** LLM via custom prompt engineering and API-driven inference pipelines, increasing recruiter screening efficiency through automated ranking algorithms.
- Optimized database performance by designing indexed **PostgreSQL** schemas and implementing efficient state management to handle concurrent user sessions and large-scale document processing.

Nudge AI | *Flutter, FastAPI*

July 2025 – October 2025

- Developed a cross-platform mobile application using **Flutter** and **FastAPI**, handling task ingestion, scheduling, and persistent state management through Firebase real-time listeners.
- Increased user productivity by **30%** by integrating OpenAI APIs for voice-to-text input and implementing an event-driven notification system for proactive task management.
- Designed and deployed a scalable backend architecture utilizing **RESTful APIs** and automated authentication flows, ensuring low-latency synchronization across multiple client devices.

SKILLS

Languages: Python, Java, TypeScript, C/C++, JavaScript, SQL (PostgreSQL)

Frameworks: React, Node.js, FastAPI, LangChain, Flutter

Tools: AWS (EC2, Lambda, DynamoDB, S3, CDK), Docker, Git, Linux, Firebase
