EDUCATION

Stevens Institute of Technology | Hoboken, NJ

June 2027

Bachelor of Science in Computer Science, Minor in Applied Mathematics

GPA: 3.88

Awards: Stevens Grant (\$180K), QuackHacks 2026 3rd Place, Deans List (2024-2026)

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Systems Programming

EXPERIENCE

Software Engineering Intern

July 2026 – Present

Dematic

Middlesex, NJ

- Engineered parser via Draw.io API to automate Mermaid diagrams, cutting architectural design time by 83%
- Architected a DITA data pipeline, eliminating manual data entry and optimizing retrieval for 9,000+ users
- Developed a RAG backend application to automate complex ISO compliance workflows, versioning 3,000+ drafts

Research Assistant

June 2026 – Present

Stevens Institute of Technology

Hoboken, NJ

- Orchestrated AI pen-testing middleware using Nmap and SQLmap, reducing session token consumption by 27%
- Designed a dynamic knowledge graph to track vulnerabilities, maintaining persistent AI context across scans
- Implemented HITL ticketing and execution guardrails for safe AI-assisted attack/defense deployment

Software Engineering Intern

January 2026 – May 2026

Stevens Blueprint

Hoboken, NJ

- Engineered an AWS Bedrock RAG system ingesting 1,000+ internal documents for 50+ concurrent team queries
- Architected a scalable serverless AWS backend (Lambda, SQS) to process concurrent event-driven user traffic
- Optimized backend retrieval via DynamoDB/S3 hybrid storage alongside strict IAM role-based access controls

Software Engineering Intern

July 2025 – October 2025

Quantum Pulse Consulting

Middlesex, NJ

- Developed cross-platform React/Flutter apps with PostgreSQL schemas for dynamic data and task scheduling
- Constructed a FastAPI/Firebase backend using OpenAI, accelerating Agile development workflows for 50+ users
- Automated AWS CI/CD pipelines and deployed RESTful APIs, securing state synchronization and release uptime

Course Assistant

September 2025 – July 2026

Stevens Institute of Technology

Hoboken, NJ

- Mentored 50+ students in Python coding fundamentals to establish modern software development workflows
- Directed Java Data Structures instruction, guiding students through code performance and bug troubleshooting
- Evaluated student project architectures utilizing UML design patterns, accelerating overall technical growth

PROJECTS

morf | C++, Raylib

github.com/yparmar2024/morf

- Engineered a high-performance C++ Git merge driver executing sub-second diffing for 10+ MB 3D mesh files
- Constructed a hardware-accelerated Raylib desktop UI to visually audit and resolve complex mesh conflicts
- Ensured strict Git LFS compatibility by decoupling heavy mathematical calculations from rendering drivers

SoDOff | C#, .NET, ILSpy

github.com/SoDOff-Project/sodoff

- Restored multiplayer by reverse-engineering game binaries to rebuild C#/.NET core server infrastructure
- Reconstructed API endpoints for client data synchronization by decoding network protocols via Wireshark
- Developed robust open-source backend server logic sustaining 250+ concurrents and 10,000+ daily active users

SKILLS

Languages: Python, Java, C, C++, C#, TypeScript, JavaScript, PostgreSQL

Frameworks: React, Flutter, .NET, FastAPI, Node.js, Springboot, Flask, Vite

Tools: AWS (EC2, Lambda, DynamoDB, S3, Bedrock, CDK), Docker, Git, Wireshark, Linux
