EDUCATION

Stevens Institute of Technology | Hoboken, NJ

Bachelor of Science in Computer Science

Minor in Mathematics

Expected Graduation: May 2027

Cumulative GPA: 3.88/4.00

Awards: Stevens Grant (\$180K), Advanced Placement Scholar Award, Deans List: Fall 2024, Spring 2025, Fall 2025

Relevant Coursework: Data Structures, Algorithms, Computer Architecture, Discrete Structures, Principles of Programming Languages, Systems Programming, Database Management Systems

EXPERIENCE

Software Engineer

Blueprint

January 2026 – Present

Hoboken, NJ

- Engineering a **Retrieval-Augmented Generation (RAG)** system using **LangChain** and **AWS Bedrock** to ingest **1,000+ internal documents**, enabling **50+ members** to execute concurrent queries across knowledge bases.
- Architecting a scalable **serverless** backend on **AWS** (Lambda, API Gateway, SQS) to efficiently process concurrent user requests, utilizing an event-driven pipeline to manage traffic spikes.
- Optimizing retrieval performance by implementing a hybrid storage design using **DynamoDB** for chat indexing and **S3** for vector storage, enforcing strict **IAM role-based access control** for data security.

Software Engineering Intern

Quantum Pulse Consulting

July 2025 – October 2025

Remote

- Built and deployed production-ready full-stack web applications, supporting authenticated users and dynamic data flows, by implementing a **React** frontend backed by **PostgreSQL** schemas and indexed queries.
- Designed and implemented **RESTful APIs** with **Firestore Authentication** and real-time listeners, enabling low-latency multi-client updates and consistent state synchronization across sessions.
- Automated cloud deployment and release workflows on **AWS** using **CI/CD pipelines**, reducing manual deployment effort and improving release reliability for iterative feature delivery.

Course Assistant

Stevens Institute of Technology

September 2025 – Present

Hoboken, NJ

- Taught **programming fundamentals** through **Python**-based lab sessions for **20+ students**, reinforcing control flow, functions, and recursion to improve code structure and correctness.
- Led **Java**-based instruction in **data structures** (lists, stacks, queues, maps) and **sorting and searching**, enabling students to build more efficient and maintainable applications.
- Reviewed and debugged student projects using **testing practices**, **UML diagrams**, and **time complexity analysis**, improving software design quality and performance awareness.

PROJECTS

Recrootly | *React, Supabase*

May 2025 – June 2025

- Built and deployed a full-stack AI-powered resume scoring platform, integrating a React frontend with a **SQL**-backed database to support structured resume ingestion and query-driven analysis.
- Increased recruiter screening efficiency by **50%** by integrating **Mistral 7B** via custom prompt pipelines, automating resume evaluation and ranking through API-driven inference workflows.

Nudge AI | *Flutter, FastAPI*

July 2025 – October 2025

- Designed and implemented backend services using **FastAPI** and **Firestore**, handling task ingestion, scheduling, and state persistence to enable scalable AI-driven task management workflows.
- Improved on-time task completion by **30%** by integrating **OpenAI APIs** with voice input, calendar syncing, and push notifications through event-driven pipelines.

Enterprise Architecture | *React, Node.js*

September 2025 – October 2025

- Reduced post-merge defects by enforcing **policy-as-code** through **CI/CD gates**, implementing automated linting, testing, coverage checks, and security scans across multiple repositories.
- Improved system observability and incident response by building telemetry pipelines using **OpenTelemetry** and defining **SLOs**, enabling faster detection and diagnosis of production issues.

SKILLS

Languages: Python, Java, TypeScript, C/C++, JavaScript, SQL

Frameworks: React, Node.js, FastAPI, LangChain, Flutter

Tools: AWS (Lambda, DynamoDB, S3, CDK), Docker, Git, Linux, Firebase
